For optimum corrosion resistance, blu™ products should be kept clean whilst in storage, during fitting and at regular intervals once in use.

To help you care, maintain and clean blu™ products the guidelines below should be followed:

- Use paper or other protective wrapping on the surface of the stainless steel until fitting is complete.
- Handle the blu™ product with clean gloves or cloths to guard against stains or finger marks.
- Clean regularly with a dry cloth or duster.
- Wash periodically with soapy water and clean with a dry cloth immediately. This should be carried out at least every six months, or bi-monthly if the product is located in a highly corrosive environment, e.g. on or near the coast.
- DO NOT use oily rags or greasy cloths when wiping the product surface.
- DO NOT use acid based cleaning materials or detergents containing chloride.
- DO NOT abrasive materials. Even the finest cleaning powders can scratch or burnish a mill-rolled finish. On polished finishes, rubbing or wiping should be carried out in the direction of the polish lines, not across them.
